LCD display

Since 1988, many fish breeders have been using our C16 counter. Now PescaVision goes still further far.

It combines an unparalleled ease of use. They can be installed very rapidly.

The PescaVision models cover counting needs extending from 80g to 4,5kg.

It is designed to be placed at the outlet of the sorting system, thereby centralising the equipment and reducing the installation time. With this system, no more counters at the ends of the pipes.

FISH COUNTER

3 PescaVision 30 with reception tank (option) connected to an Helios 30

2 PescaVision 50 with reception tank (option) connected to an Helios 50

The principle behind this counter is simple, a beam emitted by a LED crosses each of the channels. The fish that go through the beam give a counting pulse. Sizing sleeves ensure the fish pass through the beam one by one.
